Friends and Cattlemen;

Welcome to our 11th "Prime Cut on the Hoof Sale." What an interesting and challenging time in history. While it appears that our national economy is in some serious times, on the brighter side - in agriculture, cattle numbers and inventories are at the lowest numbers since the mid to late nineties. When this economy turns around, the cattle purchased today, their progeny will be finding their way to the sale barn and feedlots. We are excited about the offering we have selected for you and feel the genetics will work in many different types of programs.

Many of these bulls are out of the industry's proven leading sires. We strive to use bulls that are well balanced for maternal, growth and carcass performance. These bulls are stout, full of red meat and ready to work for you. None of our calves are creep fed, we may not have the big weaning weights but we feel it is a true measure of a cow's performance. These bulls' progeny prove that Angus cattle can still perform efficiently and effectively protecting your bottom line.

As you look through this catalog you will also find many bulls with excellent calving ease potential. The recommendations on these bulls are based on both our data and experience.

Both the commercial and registered heifers selling are out of the heart of our cow herd. Many are out of Pathfinder dams. They are feminine and should make a first rate cow herd.

In closing, we invite you to our place anytime you are in the area. We also invite your inspection of this exceptional set of cattle and to enjoy a complimentary lunch with us Thursday, March 26, 2009 at the Imperial Auction Market starting at 11:00 a.m. MDT.

Sincerely,

Todd & Donalyn Hasenauer
& Family.

PRIME CUT ON THE HOOF XI

Thursday • 12:30 MST

MARCH 26, 2009

Imperial Auction Market
IMPERIAL, NE

Selling 95 Lots

60 Performance Tested Registered Angus Yearling Bulls

5 Coming 2-Year-Old Registered Angus Bulls

5 Registered Angus Heifers

20 Purebred Angus Heifers

5 Commercial Heifers

Sale Day Phone: (308) 882-5128

AUCTIONEER: Kyle Schow (308) 239-4297

LIVESTOCK PRESS REPRESENTATIVES:

Randy Rasby *Livestock Plus Inc.*

Kevin Schow *Western Livestock Journal*

Matt Printz *Angus Journal*

FERTILITY:

All bulls selling have been fertility tested by the Western Plains Veterinary Clinic will be accompanied by proper certificates.

HERD HEALTH:

All cattle will be accompanied by proper health papers for interstate shipment. This fall, bulls and heifers were vaccinated for 7-Way Blackleg, Haemophilus, Pasteurella, IBR, PI3, BVD, BRSV, Lepto 5 and Ivomec for internal and external parasites. All females are calfhooed vaccinated and have been given their Preg Guard 9 vaccination. All bulls were tested and found free as BVD carriers. Older bulls have been Trichomoniasis tested.

TERMS & CONDITIONS:

These cattle sell under the Suggested Terms and Conditions of the American Angus Association.

GUARANTEE:

All bulls are guaranteed against breeding injury for the first breeding season. Breeding season is defined as the 90-day period following turnout of the bulls. If a replacement bull is available, he will be provided; or if the buyer prefers, credit towards one bull will be given in the following year's sale, less salvage value of the injured bull.

LODGING:

Imperial Inn, Imperial, NE 308/882-4880

TRUCKING:

Free delivery on all registered bulls and heifers in Nebraska and surrounding states.

LUNCH:

A complimentary lunch will be served starting at 11:00 a.m. MST

\$Value Indexes...What are they?

American Angus Association

\$Values are multi-trait selection indexes expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. A \$Value has meaning only when used in comparison to the \$Value of another animal. For example, just as with EPDs, variation in \$Value between animals indicates average expected differences in the relative value of progeny if random mating is assumed and the calves are exposed to the same environment.

Weaned Calf Value (\$W): an index expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F): an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning performance compared to progeny of other sires.

Grid Value (\$G): an index expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B): an index expressed in dollars per head, is the expected average difference in future progeny performance for post weaning and carcass value compared to progeny of other sires. The \$B value combines the contributions of \$F and \$G.

\$Values have meaning when used in comparing the relative merit of ranking of two individuals. For example, Bull X has a \$B value of +26.00 and Bull Y has a \$B value of +16.00. If these bulls were randomly mated to comparable females and the calves were exposed to the same environment, on the average you would expect Bull X's progeny to have a +10.00 dollar per head advantage in postweaning performance and carcass merit over Bull Y's progeny (26.00-16.00= +10.00 per head).

The \$B value is not designed to be driven by one factor such as quality, red meat yield or weight. Instead, it is a result of the application of industry-relevant market values to Angus genetics for both feedlot performance and carcass merit.

How do I use them?

\$Values should be used to complement the selection criteria that producers already use when selecting bull. Economic studies have shown that fertility and reproductive value are the primary determinant of profitability in a cowherd. Performance and growth are next, followed by carcass characteristics. For this reason, **\$Values are not to be used as a single selection criterion, since they only combine postweaning growth and carcass performance.** \$Values do not account for any reproductive or preweaning calf genetic or economic values.

The \$W, \$F, \$G and \$B values on individual animals and the Spring 2005 Sire Evaluation Report may be viewed at www.angus.org. Questions on \$Values can be directed to:

American Angus Association
Performance Programs Department
3201 Frederick Ave.
St. Joseph, Mo 64506
(816)383-5100ahir@angus.org

American Angus Association Selection Tools

Expected Progeny Difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NEC.

Growth

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Maternal

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is the part of a calf's weaning weight attributed to milk and mothering ability.

Ultrasound

Intramuscular Fat EPD (%IMF), is a predictor of the difference in a sire's progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

Ribeye Area EPD (RE), is a predictor of the difference in square inches of ultrasound ribeye area of a sire's progeny compared to the progeny of other sires.

Fat Thickness EPD (FAT), expressed in inches, is a predictor of the difference in ultrasound fat thickness at the 12th rib of a sire's progeny compared to the progeny of other sires. It includes the weighted average of 60% of the rib fat measurement and 40% of the rump fat measurement.

Carcass

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (FAT), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

20 COMMERCIAL ANGUS HEIFERS

These heifers are out of our registered Angus cows. These cows caught us off guard by calving one cycle earlier than expected. Since we had no record of a bull in with them, we have elected to sell them as commercial, no papers. These cows have always been the first to calve, many are Pathfinders. These heifers are pelvic measured, Preg Guard 9 and weighing 850 plus pounds. They will make a great start for a commercial herd or add to your existing replacements.
